

GROUP 4

BRINGING UP BABY

Romantic comedy about a man and a woman who falls in love and lost their leopard. It is a 1938 American [screwball comedy film](#) directed by [Howard Hawks](#) and when it was released viewers didn't like it. After a while it started to get attention.

Main characters:

Katharine Hepburn, Cary Grant and Leopard

First ideas, challenges, changes and good aspects:

We thought about a lot of different options how to make it interesting and appealing to 15-17-year-old target group. Our first idea was that we could make a game where you have to find the leopard because that's what the whole movie is about and that way we could include interactivity as well. We started to plan a scene where there is an illustrated room from the movie and the user has to click on different things and try to find the leopard. Then the idea escalated, we thought of doing a memory game, because we realised that our coding skills are not so strong to create our first idea. We had to reduce our expectations but after that it was much easier for us to work on it, because we knew our limits.

Our memory game is basically made of the objects from the movie. All of them - marriage rings, old vintage car, scroller and leopard are a huge part of the movie and also some kind of keys to the point of the movie. We created a gaming cards, where are the objects hidden and the point is to find four pairs of the things. When you find the correct one, you can hear a nice sound, when you are wrong, there is a humming. During a player is playing the game, there is a music from the movie - I cannot give you anything but love. When you win the game, the gif appears and then it goes straight to credit page.

We have learned not to overestimate us, because we lost a lot of time on our first idea until we realized, that we are just not able to do it. It would be also better to work on managing of time, because everything could be finished sooner and we could be prepared more. On the other hand, we are really proud, how we worked in a group, everyone did some part of a project and everything was in a friendly atmosphere without arguments. And even that we know, we should practise our Java Script skills, we finished it and even better, it is working, so we are proud of it.
